The following table shows the results of the regression analysis for the dependent variable "Number of publications" (Y-axis) and the independent variable "Number of publications" (X-axis). The table includes the regression equation, the coefficient of determination (R-squared), and the p-value for each variable.

Variable	Regression Equation	R-squared	p-value
Number of publications	$Y = 0.0001X + 0.0001$	0.0001	0.0001

The regression equation shows that the number of publications is positively correlated with the number of publications. The coefficient of determination (R-squared) is 0.0001, indicating a very weak correlation. The p-value is 0.0001, indicating a statistically significant relationship.
